Referral Guidelines

Appropriate patients for MyClinic LD Clinic include:

- Uncomplicated statin intolerance
- Secondary dyslipidaemia
- Intermediate to high-risk profile patients for primary prevention
- DLCNC* < 3 or low risk FH

The MyClinic LD clinic is not aimed for patients with:

- Suspected as Familial Hypercholesterolemia (FH) with DLCNS* ≥ 3
- Premature coronary artery disease (male < 55 and female < 60 y.o) and suspected as having hereditary lipid disorders such as FH, FCH, etc.
- Patients with documented progressive coronary artery disease and Atherogenic Dyslipidaemia (AD)
- Severe hypertriglyceridemia; TG > 10 mmol/L with or without complication of pancreatitis
- Documented severe rhabdomyolysis as a side effect of statin therapy

“The Myclinic Mulgrave “**Lipid Disorder (LD) Clinic**” is one of the first primary care lipid clinic in Victoria, run by a General Practitioner with a special interest in the management of lipid disorders. This clinic works in partnership with “**MonashHeart Advanced Lipid Disorder Service**” as part of an Integrated Tertiary and Primary Care (ITPC) Clinical Service to optimise the management of patients with dyslipidaemia.

This clinic has been established on the evidence-based medicine to optimise prevention of cardiovascular disease in our community by improving interdisciplinary teamwork, communication, education, accessibility of care and cost-effectiveness. Patients are experiencing difficulties in the management of dyslipidaemia such as statin intolerance, those carrying a high risk of cardiovascular disease and not achieving target level in their lipid profile can be managed in this clinic. Details of MonashHeart ALD service are available on the MonashHeart website:

<http://www.monashheart.org.au/index.php/for-medical-professionals/referrals/>

* **DLCNC:** Dutch Lipid Clinical Network Criteria
